

Juan Diego Figari

Buenos Aires, Argentina

juancito.diego@gmail.com | <https://github.com/Yarthax23>

Summary

Computer Science student (University of Buenos Aires) with product experience: I find what breaks by using the software, reproduce it, and either fix it or report it with clear documentation. Trilingual (Spanish, English, French), with experience in customer service and teaching.

Work Experience

Urbanly LLC — Junior Engineer

Jan 2026–Sep 2026

Simulation software for urban planning (CityCompass: TypeScript, React, MapLibre).

- **Simulation debugger.** While making a product video, the debugger paused every month on the land and housing auctions, but it could not follow anyone in particular. I proposed and built tracking: pick one or more parcels or developers and follow them from the land auction to the sale of the homes, with a mode that skips the months where nothing happens.
- **Transport network.** While preparing a demo video (edit the network and see accessibility change), I found why a new line had no effect: it was created inactive because of its year range. I also found two bugs that left bus accessibility empty. I reproduced and fixed them, and added buttons to turn all lines on or off at once.
- **Colour palette editor.** I built the editor for map layer colours and ranges, iterating with the design team over several reviews. Later I found and fixed a case where typing a value silently deleted classes: a nine-class palette became two.
- **Accessory dwelling units (ADUs).** Collaboration with researchers at Cal Poly Pomona on ADU construction in Los Angeles: the model, validation against real permit records, and the report for the collaborators.

McDonald's — Arcos Dorados S.A.

2023–2024

- Customer service, cash handling and closing; recognized as an outstanding presenter.

Piano Teacher (freelance)

2021–2025

- Private lessons adapted to each student; self-managed students and schedules.

Projects

Geospatial Data Visualization — Buenos Aires Subway ([GitHub](#))

2026

- Web map built with MapLibre GL JS on City of Buenos Aires open data, with an offline pipeline that normalizes CSV and GeoJSON sources.

Event-Driven Chat Server in C ([GitHub](#))

2025

- Multi-client server with UNIX sockets and `select()`; layered protocol, designed to be easy to debug.

Other: REST API in Go with PostgreSQL ([repo](#)); functional and logic programming exercises in Haskell and Prolog ([repo](#)).

Skills

- **Product quality:** exploratory testing, bug reproduction and reporting, browser developer tools
- **Frontend:** TypeScript, React, MapLibre GL, JavaScript, HTML/CSS
- **Collaboration:** Git and GitHub (issues, pull requests, code review), working with design teams and external researchers
- **Other languages and tools:** C, Go, Python, Haskell, Prolog; Linux, Bash, PostgreSQL

Education and Languages

B.Sc. in Computer Science — University of Buenos Aires, in progress (53% completed)

Bilingual High School Diploma in Science and Computing — Liceo Franco Argentino Jean Mermoz

Languages: Spanish: native · English: advanced · French: advanced
